

# Knysna Photographic Society

Policy Note 03;

Approved by the Committee on 12<sup>th</sup> July 2023

## Artificial Intelligence (AI).

### Background;

Artificial intelligence in our digital world has made a big impact on the way we do things, including our world of photography. This policy note serves to indicate where this technology can and cannot be used, in the context of our club activities.

The committee agreed the following;

1. AI is permitted where it is part of "tool" functionality, within specific post processing software platforms. Examples of this are auto corrections, sharpening, selections, dehaze, denoise, "content aware" operations and the like.
2. AI is not permitted where it is used to generate images or elements within an image. As before, all work entered into club platforms must be the work of the respective member, including all sub components of composites.
